$650B+ AI market. Zero trust guarantees.

Platformless AI

Agentic AI • Image Gen • Vision/OCR • E2E Encrypted • P2P

Trustless • Private • Sovereign

Jules Lai | Founder & CTO | February 2026

The Problem

Platform Lock-in

OpenAI, Anthropic, Google control access, pricing, and policies

Privacy Risk

Every prompt stored on corporate servers; training on user data

Censorship

Platforms decide what you can ask; access revoked without recourse

Single Point of Failure

One API key dependency for entire business; outages affect everyone

The Paradigm Shift

Platform Model

- ✗ Centralised control
- ✗ Data on corporate servers
- ✗ Platform sets prices
- ✗ Can revoke access
- ✗ Single point of failure
- ✗ Vendor lock-in

Platformless Model

- ✓ Smart contract coordination
- ✓ End-to-end encrypted
- ✓ Market-driven pricing
- ✓ Permissionless access
- ✓ Fault-tolerant P2P
- ✓ Multi-host, multi-model

"We don't trust, we verify."

How It Works

User
Encrypted request

→

Smart Contract
Escrow & match

→

GPU Host
P2P inference

→

ZK Proof
Verify compute

→

S5/Sia
Decentralised store

Client Layer

SDK-powered apps, encrypted WebSocket

Blockchain Layer

Base L2 smart contracts, escrow, settlement

Host Layer

LLM, image gen, vision, 20+ tools

Storage Layer

S5/Sia — world's safest cloud storage

The Trust Stack

Proof of Storage

Sia Network — world's safest cloud storage, by design

Proof of Computation

Zero-knowledge proofs (STARK) verify inference

Content Integrity

Blake3 content addressing, tamper-proof

Communication Privacy

XChaCha20-Poly1305 end-to-end encryption

Full Transparency

Open source — every line auditable

User Sovereignty

Wallet-based identity, you control your keys

Trust through code, mathematics, and economic incentives — not reputation

Traction & Validation

Technical Milestones

- Full-stack MVP operational
- Smart contracts deployed (Base L2)
- Zero-knowledge proof verification working
- End-to-end encryption enabled by default
- Sia storage integrated (world's safest by design)
- Claude Bridge + OpenAI Bridge complete
- Image generation (diffusion models)
- Vision/OCR processing (state-of-the-art)

Business Validation

- Sia Foundation grant (Enhanced S5.js)
- Smart contract audit in progress
- Initial GPU hosts committed
- Agentic coding in production (Claude Code, OpenCode)
- 20+ agentic tools supported
- Any LLM supported (MoE to frontier models)
- Verifiable agentic AI infrastructure

🚀 Companies already approaching us to use this as SaaS AI backend infrastructure

Business Model & Market

Revenue Model

Protocol Fee	10% of inference payments
Host Earnings	90% to GPU providers
FAB Token	Staking, governance, discounts
Enterprise	SaaS backend, image gen, agentic

Market Opportunity

TAM	$650B+ Global AI Market
SAM	$175B+ Agentic AI + SaaS AI + Privacy
SOM	$500M+ Trustless AI early adopters

Agentic AI / Coding: $50B+ by 2030

AI-Powered SaaS: $90B+ by 2030

Enterprise AI Security: $35B+

Target Segments

Enterprise
IP protection, compliance

Agentic AI
20+ tools, coding agents

SaaS Companies
AI backend, no lock-in

Creative AI
Image gen, vision, OCR

Team

Jules Lai

Founder & CTO

- 25+ years software engineering (C++, full-stack, blockchain)
- Computing Science BSc (Imperial College London), MSc Financial Mathematics
- Previously: Deloitte (Lead Developer, financial derivatives)
- £400K+ bootstrapped into Fabstir (4 years development)
- Sia Foundation grant recipient (Enhanced S5.js)

Team Expansion (Post-Funding)

DevOps Engineer
Committed
Infrastructure, GPU hosting

Business Development
To hire
Partnerships, enterprise sales

Developer Relations
To hire
SDK adoption, marketing

Roadmap

Phase 1-4

Core Infrastructure

Complete

- Smart contracts
- P2P WebSocket
- Encryption
- STARK proofs
- S5/Sia storage

Phase 5

Agentic + Multimodal

Complete

- Claude + OpenAI Bridges
- Agentic coding
- Image gen (diffusion)
- Vision/OCR
- Dynamic pricing

Phase 6

Economic Refinement

Q2 2026

- Reputation scoring
- Host quality metrics
- Performance dashboards
- Uptime/latency tracking

Phase 7-8

Scale & Governance

Q3-Q4 2026

- DAO governance
- Multi-chain expansion
- State channels
- Video transcoding

The Ask

Seed Round: $500K–750K

Revenue-generating upon audit completion (Q1 2026)

Product & Team Founder, senior contractor, development	27%
DevOps & Infrastructure Engineer, GPU hosting, scaling	20%
Legal, Compliance & ISO ISO 27001 + 42001, regulatory	20%
FAB Token Launch CEX listing, liquidity, market maker	18%
Marketing & Growth Developer acquisition, conferences	9%
Reserve Contingency buffer	6%

What's Already Covered

- ✓ Smart contract audit (in progress)
- ✓ Core development (MVP beta)
- ✓ S5/Sia integration (grant-funded)
- ✓ Claude + OpenAI Bridges (complete)
- ✓ Image gen + Vision/OCR (complete)
